Version 2.1.17.12

What's New

1. the league software is now branded as “Bethico League”
2. new code for multi-frame games
3. added copyright notices for contributors to the website

Fixed Issues

1. entering tournaments: under some conditions the site would change the bracket positions of players entered, and would not allow to rearrange it correctly
2. save in “Edit Match” would change player positions when a game was skipped in temporary match entry, or when a game was entered incomplete, e.g. when entered player names of only one team when “save” was hit
3. schedule upload in back-end fixed for seasons without divisions
4. local time was not set correctly for the league, resulting in date/time sensitive functionality not working, e.g. “Season → Schedule” would not change to next week's schedule at midnight of the league play day
5. the “Latest Results” page now includes arbitrary ruled matches
