

# LXQt Display Manager

- Check [Locale](#), note that within LXQt you can set locales in the GUI which do not (yet) have a translation and will cause error messages. You might want to modify LC\_TIME, LC\_PAPER, and LC\_MEASUREMENT to a different locale than the default locale, and verify the following files are set correctly

```
/etc/default/locale  
/home/user/.config/lxqt/lxqt-config-locale.conf  
/home/user/.config/lxqt/session.conf
```

- [Lubuntu Manual 19.10](#)
