Network

1. Main server
    - NetworkManager: static IP address for one of the NICs, make sure the settings is assigned to the correct NIC
    - Set the second NIC to `unmanaged` in NetworkManager's command line interface (`nmcli`)
    - Define the second NIC in `/etc/interfaces` to be brought up without IP address
    - Check settings in `/etc/interfaces/interfaces.d/orange` and `/etc/NetworkManager/NetworkManager.conf`
2. VM host
    - Connect to the server's second NIC as `bridged`
    - NetworkManager: static IP address
    - Check settings in `/etc/interfaces/interfaces.d/` and `/etc/NetworkManager/NetworkManager.conf`
