Web Server - Debian Bullseye 11.4 (VPS)

- I originally switched my VPS from a provider in Thailand to a VPS provided by Server4you 24th September 2021, but they announced to discontinue offering VPS in 2022.
- I switched 27th July 2022 to Contabo which is a German company running servers in all parts of the world. I chose server location Düsseldorf/Germany and Debian 11.4 as OS.
- Read How to migrate a (web) server

VPS specification

- 4 vCPU
- 8 GB RAM
- 200 GB SSD
- 32 TB outgoing traffic / month
