

KMIP Server (PyKMIP)

- Install Python3, the Python package manager and dependencies:

```
sudo apt update
sudo apt install python3 python3-pip python3-venv libssl-dev libffi-dev
python3-dev
```

- Verify the installation:

```
pip3 --version
```

- Create a virtual environment and activate it:

```
python3 -m venv pykmip-env
source pykmip-env/bin/activate
```

- To deactivate the virtual environment, enter deactivate within the virtual environment
- To manage packages you can use:

```
pip3 install package_name
pip3 install --upgrade package_name
pip3 uninstall package_name
```

- Once inside your virtual environment, upgrade pip and install the pykmip library:

```
pip install --upgrade pip
pip install pykmip
```

- Verify the installation:

```
python3 -c "import kmip; print(kmip.__version__)"
```
