# UFW Firewall

1. Install with:

```
apt update
sudo apt install ufw
```

2. Check preset profiles and allow necessary services as root:

```
sudo ufw app list
sudo ufw default allow outgoing
sudo ufw allow OpenSSH
sudo ufw allow "WWW Full"
sudo ufw allow Samba
sudo ufw allow 1194 # OpenVPN
sudo ufw allow 3493 # NUT
sudo ufw allow <custom port>/tcp # FTP
sudo ufw allow <custom port:range> # FTP passive port range/tcp
```

3. Enable firewall and check status:

```
ufw enable
sudo ufw status
```

4. Remove firewall rule:

```
sudo ufw status numbered
sudo ufw delete <rule number>
```
