Initial configuration

add users

```
adduser <username>
vim /etc/group
```

If necessary, add permissions to the respective user

```
visudo
```

change hostname

```
hostname <newname>
```

install bandwith monitor

```
yum -y install vnstat
```

Run the following command to establish the database:

```
vnstat -u -i eth0
```

Then enter the same command into the crontab to be executed every hour:

```
crontab -e
0 * * * * root vnstat -u -i eth0
```

Check daily, weekly or monthly bandwidth usage with vnstat -d, vnstat -w or vnstat -m, e.g.

```
vnstat -m
```
