

# Initial configuration

## add users

```
adduser <username>  
vim /etc/group
```

If necessary, add permissions to the respective user

```
visudo
```

## change hostname

```
hostname <newname>
```

## install bandwidth monitor

```
yum -y install vnstat
```

Run the following command to establish the database:

```
vnstat -u -i eth0
```

Then enter the same command into the crontab to be executed every hour:

```
crontab -e  
0 * * * * root vnstat -u -i eth0
```
