

Akeeba Backup

Joomla 3.10

Edit the file

administrator/components/com_akeeba/BackupPlatform/Joomla3x/Platform.php and find this block of code in lines 735-751:

```
// If the release is older than 3 months, issue a warning
if (defined('AKEEBA_DATE'))
{
    $releaseDate = new Date(AKEEBA_DATE);
```

```
    if (time() - $releaseDate->toUnix() > 10368000)
    {
        if (!isset($ret['warnings']))
        {
            $ret['warnings'] = [];
            $ret['warnings'] = array_merge($ret['warnings'], [
                'Your version of Akeeba Backup is more than 120 days old
and most likely already out of date. Please check if a newer version is
published and install it.',
            ]);
        }
    }
}
```

Change the second line reading `if (defined('AKEEBA_DATE'))` to now read:

`if (false)` Save the file. Now the code which was adding the backup warning is removed.

I would also like to ask you for your permission to set this ticket to public.
