Migration

See Reverse Proxy for guidance on how to set up a site behind a reverse proxy.

Migrate v3.10 to v4.4.14

This migration does not work under WSL or behind a reverse proxy. Joomla 3.10 and Joomla 4 handle reverse proxies differently.

Do the following steps on your original Joomla 3.10 installation running php 8.1

1. Change ownership of all files to `www-data:www-data`
2. Uninstall **SP Upgrade**
3. Uninstall **Akeeba Backup** 8.4.1.1
4. Install **Akeeba Magic Eraser** - ignore all error messages
5. Install Phoca Download 4.0.9 over 3.2.3
6. Disable Kunena Plugins
    - System - Kunena Forum
    - Quick Icon - Kunena Forum
    - Kunena - Joomla Integration
    - Kunena - Kunena Integration
7. Disable Bethico Plugins
    - System - Bethico
    - System - Bethico System Plugin
8. Go To **Components → Joomla Update**, click *Options* and select *Joomla Next* in *Update Channel*
9. Go To **Components → Joomla Update**, download the update file, then select tab *Upload & Update* and select the Update-file to Joomla 4.4.14. The files update fast and the progress bar adavances to 90.8%, but the database update might take several minutes to complete.
10. Install **Akeeba Backup** 10.3.3
11. Akeeba Backup configuration, then take a backup

Migrate v4.4.14 to v5.4.5

This migration works under WSL and behind a reverse proxy

Do the following steps on your existing or new server running php 8.1 or php 8.4

1. WSL: Copy the backup of version 4.4.14 to a local folder, then unzip from within WSL (CLI) and change ownership to www-data
2. WSL: Change ownership of this local folder to www-data and permissions to 0770
3. Start the update from Joomla's back-end
4. WSL: Make sure file permissions are enabled in WSL Settings, otherwise it is not possible to install extensions
5. Update Plugin “System - Bethico”
6. Enable “Track Session Metadata” in Global Configuration → System
7. Uninstall component **Bethico League**
8. Uninstall template **bethicoleague**
9. Manually remove folder `/media/bethico` and `/media/com_bethico`
10. Manually remove files `/language/en-GB/en-GB.tpl_bethico.ini`
11. Rename `/images/bethico` to `/images/bethicoleague`

Settings for v5.4.5

1. Install *Bethico League* (com_bethicoleague) and save the options parameters
2. Install the *Bethico League template* (tpl_cassiopeia_bethicoleague)
3. Set module **Bethico Legal** to position <footer>
4. Do the Database Changes
5. Install *Bethico Languages* (mod_bethico_languages) and enable for all pages
6. Install *Bethico Legal* (mod_bethico_legal)
7. Re-assign all menu items and move menu *Member Menu* → *Login* to *Main Menu –> Login*
8. Remember to save menu *Bethico League Options* parameters to registry
9. Install *BethicoFA* (plg_system_bethicofa)
10. Install *Joomill Custom Quick Icons* for admin backend

Bethicoleague Component

1. copy the following folders from “ipl” to “ipl4”
    - components/com_bethico
    - administrator/components/com_bethico
    - media/bethico
    - media/com_bethico

Bethicoleague Template

Abandon the bethicoleague template and integrate into cassiopeia, which will give us a much easier way to maintain the template.

1. click the `cassiopeia` template and create a child template for cassiopeia named `bethicoleague`, this will create a child template named `cassiopeia_bethicoleague`
2. paths with modified files for template `cassiopeia_bethicoleague`:

```
/templates/cassiopeia_bethicoleague/
/media/templates/site/cassiopeia_bethicoleague/
/language/en-GB/tpl_cassiopeia_bethicoleague.ini
```

3. move “Login” from “Member Menu” to “Main Menu”
4. set *Layout* to *Collapsible Dropdown* in *System → Site Modules → Main Menu → Advanced*
5. install `plg_system_bethicoFA`
6. Menu Items: go to each *Menu Item → Link Type* and set *Link Icon Class* to something like `fas fa-home` and set *Display Menu Item Title* to *yes*

1. move `login disabled` to module
2. strings in install package wrong for `mod_bethico_switcher`
3. move Webmaster settings to new module

Bethico Modules

Development

- If you did not install the new version of the module with updated manifest file you need to add the autoloader path manually to

```
/administrator/cache/autoload_psr4.php
```

Update and enable Modules

```
mod_bethico_cookie
```

Disable Modules

```
```

Bethico Plugins

Update and enable Plugins

```
plg_system_bethicofa
```

Disable Plugins

```
```
