Migration

See [Reverse Proxy](#) for guidance on how to set up a site behind a reverse proxy.

Migrate v3.10 to v4.4.14

This migration does not work under WSL.

Joomla 3.10 and Joomla 4 handle reverse proxies differently, that is why the upgrade behind a reverse proxy results in a error message. However, the upgrade completed.

1. Change ownership of all files to `www-data:www-data`
2. Uninstall Akeeba Backup 8.4.1.1
3. Install Akeeba Magic Eraser - ignore all error messages
4. Install [Phoca Download](#) 4.0.9 over 3.2.3
5. Disable Kunena Plugins
 - System - Kunena Forum
 - Quick Icon - Kunena Forum
 - Kunena - Joomla Integration
 - Kunena - Kunena Integration
6. Disable Bethico Plugins
 - System - Bethico
 - System - Bethico System Plugin
7. Go To "Components - Joomla Update", click *Options* and select *Joomla Next* in *Update Channel*
8. Go To "Components - Joomla Update" and do the Live Update to Joomla 4.4.14
9. Install Akeeba Backup 10.0.3
10. Akeeba Backup configuration, then take a backup

Migrate v4.4.13 to v5.1.3 (5.4.1)

This migration works under WSL and behind a reverse proxy

1. Copy the backup of version 4.4.13 to a local folder, then unzip from within WSL (CLI) and change ownership to `www-data`

2. Change ownership of this local folder to www-data and permissions to 0770
3. Start the update from Joomla's back-end
4. Make sure file permissions are enabled in [WSL Settings](#), otherwise it is not possible to install extensions
5. Update Plugin "System - Bethico"
6. Enable "Track Session Metadata" in Global Configuration → System

Bethicoleague Component

1. copy the following folders from "ipl" to "ipl4"
 - components/com_bethico
 - administrator/components/com_bethico
 - media/bethico
 - media/com_bethico

Bethicoleague Template

Abandon the bethicoleague template and integrate into cassiopeia, which will give us a much easier way to maintain the template.

1. click the cassiopeia template and create a child template for cassiopeia named bethicoleague, this will create a child template named cassiopeia_bethicoleague
2. paths with modified files for template cassiopeia_bethicoleague:

```
/templates/cassiopeia_bethicoleague/  
/media/templates/site/cassiopeia_bethicoleague/  
/language/en-GB/tpl_cassiopeia_bethicoleague.ini
```

3. move "Login" from "Member Menu" to "Main Menu"
4. set *Layout* to *Collapsible Dropdown* in *System* → *Site Modules* → *Main Menu* → *Advanced*
5. install plg_system_bethicoFA
6. Menu Items: go to each *Menu Item* → *Link Type* and set *Link Icon Class* to something like *fas fa-home* and set *Display Menu Item Title* to *yes*

1. move `login_disabled` to module
2. strings in install package wrong for `mod_bethico_switcher`
3. move Webmaster settings to new module

Bethico Modules

Development

- If you did not install the new version of the module with updated manifest file you need to add the autoloader path manually to

```
/administrator/cache/autoload_psr4.php
```

Update and enable Modules

mod_bethico_cookie

Disable Modules

Bethico Plugins

Update and enable Plugins

plg_system_bethicofa

Disable Plugins
