- [Eclipse on WSL](#)

## Migration

See [Reverse Proxy](#) for guidance on how to set up a site behind a reverse proxy.

### Migrate v3.10 to v4.4.14

This migration does not work under WSL.

Joomla 3.10 and Joomla 4 handle reverse proxies differently, that is why the upgrade behind a reverse proxy results in a error message. However, the upgrade completed.

### Do the following steps on your original Joomla 3.10 installation running php 8.1

1. Change ownership of all files to `www-data:www-data`
2. Uninstall **Akeeba Backup** 8.4.1.1
3. Uninstall **SP Upgrade**
4. Install **Akeeba Magic Eraser** - ignore all error messages
5. Install [Phoca Download](#) 4.0.9 over 3.2.3
6. Disable Kunena Plugins
  - System - Kunena Forum
  - Quick Icon - Kunena Forum
  - Kunena - Joomla Integration
  - Kunena - Kunena Integration
7. Disable Bethico Plugins
  - System - Bethico
  - System - Bethico System Plugin
8. Go To "Components - Joomla Update", click *Options* and select *Joomla Next in Update Channel*
9. Go To "Components - Joomla Update" and do the Live Update to Joomla 4.4.14
10. Install **Akeeba Backup** 10.3.3
11. Akeeba Backup configuration, then take a backup

### Migrate v4.4.14 to v5.4.5

This migration works under WSL and behind a reverse proxy

## Do the following steps on your existing or new server running php 8.1 or php 8.4

1. **WSL**: Copy the backup of version 4.4.14 to a local folder, then unzip from within WSL (CLI) and change ownership to www-data
2. **WSL**: Change ownership of this local folder to www-data and permissions to 0770
3. Start the update from Joomla's back-end
4. **WSL**: Make sure file permissions are enabled in [WSL Settings](#), otherwise it is not possible to install extensions
5. Update Plugin "System - Bethico"
6. Enable "Track Session Metadata" in Global Configuration → System
7. Uninstall component **Bethico League**
8. Uninstall template **bethicoleague**

## Bethicoleague Component

1. copy the following folders from "ipl" to "ipl4"
  - components/com\_bethico
  - administrator/components/com\_bethico
  - media/bethico
  - media/com\_bethico

## Bethicoleague Template

Abandon the bethicoleague template and integrate into cassiopeia, which will give us a much easier way to maintain the template.

1. click the cassiopeia template and create a child template for cassiopeia named bethicoleague, this will create a child template named cassiopeia\_bethicoleague
2. paths with modified files for template cassiopeia\_bethicoleague:

```
/templates/cassiopeia_bethicoleague/  
/media/templates/site/cassiopeia_bethicoleague/  
/language/en-GB/tpl_cassiopeia_bethicoleague.ini
```

3. move "Login" from "Member Menu" to "Main Menu"
4. set *Layout* to *Collapsible Dropdown* in *System* → *Site Modules* → *Main Menu* → *Advanced*
5. install plg\_system\_bethicoFA
6. Menu Items: go to each *Menu Item* → *Link Type* and set *Link Icon Class* to something like fas fa-home and set *Display Menu Item Title* to yes

1. move login\_disabled to module
2. strings in install package wrong for mod\_bethico\_switcher
3. move Webmaster settings to new module

## Bethico Modules

### Development

- If you did not install the new version of the module with updated manifest file you need to add the autoloader path manually to

```
/administrator/cache/autoload_psr4.php
```

### Update and enable Modules

```
mod_bethico_cookie
```

### Disable Modules

## Bethico Plugins

### Update and enable Plugins

```
plg_system_bethicofa
```

### Disable Plugins

## Kunena Forum

## Phoca Download
