db: #__bethico_config->frames_term	options: frames_term
db: #__bethico_config->bye_term	options: bye_term
options: wiki	options: wikiURL 

Todo Admin

- check and set options if empty in Plugin Bethico or BethicoAdmin:

```

use Joomla\CMS\Plugin\CMSPlugin;
use Joomla\Event\Event;

class PlgSystemMyPlugin extends CMSPlugin
{
    public function onExtensionBeforeSave($context, $table)
    {
        // 1. Check if we are saving component options (com_config)
        if ($context !== 'com_config.component') {
            return;
        }

        // 2. Identify which component's options were saved
        $componentName = $table->element; // e.g., 'com_content'
        if ($componentName === 'com_mycomponent') {
            // 3. React to the save (e.g., clear cache, log activity)
            $params = $table->params; // The new parameters
            // Your custom logic here
            // check whether we can modify $table, or we need to call
            $table->params->set('start_year', date('Y'));
        }
    }
}
    
```

```
}
```

Todo Site

Get model

```
public function getOtherModelData()
{
    // ... some logic ...

    // Get an instance of 'MyModel2' from the same component (e.g.,
    'com_mycomponent')
    // Assumes MyModel2 is in the Site directory if the current model is
in Site
    $otherModel = Factory::getApplication()
        ->bootComponent('com_mycomponent')
        ->getMVCFactory()
        ->createModel('MyModel2', 'Site'); // Replace 'Site' with
'Administrator', 'Cli', or 'Api' if needed

    // Now you can call methods on the other model
    $items = $otherModel->getItems(); // Example method call

    return $items;
}
```

Joomla 5 deprecated

Joomla 3.10	Joomla 5.0	Joomla 6.0
