

# Install Webmin and Perl dependencies

Webmin is an excellent browser interface to handle most of your system services. Even if you use your machine only as a workstation (not as a server), it is worthwhile to install Webmin.

## Install modules

make sure the universe repository is uncommented in `/etc/apt/sources.list`

```
sudo apt-get install libnet-ssleay-perl libauthen-pam-perl libio-pty-perl  
libmd5-perl  
sudo dpkg --install webmin_1.350_all.deb
```

## Setting up webmin

Webmin install complete. You can now login to <https://yourmachinename:10000/> as any user who can use sudo to run commands as root.
