

Firmware upgrade on Tanix Tx6 (Android 9)

The firmware upgrade is tricky on a Tanix Tx6 box. You need to follow the guide exactly to make it work.

1. Download [PhoenixSuit](#) Firmware flash tool for Allwinner CPUs. Select the latest version and find the *START NOW* link. Install it on your PC.
2. Find a suitable firmware file. The links which are made available from [Tanix](#) did not work for me, finally I found a working image at [GetDroidTips](#).
