Access Samba Server Shares

First, install the samba filesystem:

```
apt-get install smbfs
```

To manually mount a samba share:

```
mount -t  smbfs -o username=<username>,password=<password>,iocharset=utf8
//<servername>/<sharename> /mnt/point/
```

iocharset=utf8 is necessary to transfer filenames in utf8 charset (e.g. German character filenames).

To have the samba share mounted during boot-time, edit fstab:

```
mkdir /mnt/<sharename>
vim /etc/fstab
//<servername>/<sharename>  /mnt/<sharename>  smbfs
username=<username>,password=<pwd>,iocharset=utf8  0  0
```
