Install utilities

zip

```
# apt-get update
# apt-get install zip
```

ntp

Install synchronization to Network Time Protocol servers:

```
# apt-get install ntp
```

Configuration is in file /etc/ntp.conf
After changing the config file you have to reload the ntpd:

```
# service ntp reload
```

View status:

```
# ntpq -p
```

Java

Install Java to run the yuicompressor, which compresses css and js files:

```
# apt-get update
# apt-get install default-jre
```

Note that there are more than 150 dependencies to be installed.
