

# Network Configuration

We need to bring up the interfaces (eth0) with a static IP address, raspian's default is dhcp.

## Static IP address

```
# nano /etc/network/interfaces
```

Change

```
iface eth0 inet dhcp
```

to

```
iface eth0 inet static
```

and add the following lines

```
address 192.168.1.5  
netmask 255.255.255.0  
network 192.168.1.0  
broadcast 192.168.1.255  
gateway 192.168.1.1
```

## Restart Network

Restart network:

```
sudo /etc/init.d/networking restart
```
