

# GIMP 2.8

## Change color of text within selection

- Select layer with color area to be changed, *Select -> All*, select this color area with the *Fuzzy Select Tool*, *Select -> Invert*.
- Select layer with text and click text within color area, this should result in selection around text within color area. Make layer with color area invisible.
- Click *Select -> Selection Editor*, set *Opacity* to 100, *Threshold* to 80 (normal font weight) or 120 (bold), *Fill by* to Alpha, and enable *Antialiasing*. Shrink the selection by 1px in *Select -> Shrink*.
- Select *Bucket Fill Tool*, choose foreground color, and click on each letter within the color area.

## Text along path

- Create selection, for example a circle, then select *Selection to path*.
- *Invert* the selection if the text needs to follow  $\wedge$  instead of  $\vee$ . Select *Invert* and click next to the path.
- Write the text and select *Text along path*.
- Create new layer and select *Path to selection*. Hide other layers and fill the selection with color.
