Portable Apps

PortableApps

CDex

1. The latest version [CDex 2.24](#) cannot be downloaded. Continue to use v2.23, and modify file *X:\PortableApps\CDExPortable\App\AppInfo\appinfo.ini* to 2.24 to avoid upgrade notices when PortableApps starts.

Update SSH and SCP

1. Replace folders *PortableApps\PuTTYPortable* and *PortableApps\WinSCPPortable* from the latest updated installation
2. Replace folders *PortableApps\BcoSSH* and *PortableApps\BcoSCP* from the latest updated installation
3. Run *Apps –> Refresh App Icons* within the PortableApps Platform
4. Open *X:\PortableApps\PuTTYPortable\Data\settings\putty.reg* and modify all references to the private key file to match the client you're updating the installation on (reference is from "master"). Be careful not to run the registry file, but to load it in your editor, the registry values are managed by the PortableApps loader. Note that back slashes need to be escaped in registry files.

   ```
   "PublicKeyFile"="\\Security\\SSH\\master_id_ecdsa.ppk"
   "PublicKeyFile"="\\Security\\SSH\\client_id_ecdsa.ppk"
   ```

5. Open *X:\PortableApps\WinSCPPortable\Data\settings\winscp.ini* and modify all references to the private key file to match the client you're updating the installation on (reference is from "master"). Note that back slashes and spaces need to be entered with their hex char representation in the ini file.

   ```
   PublicKeyFile=%5CSecurity%5CSSH%5Cmaster_id_ecdsa.ppk
   PublicKeyFile=%5CSecurity%5CSSH%5Cclient_id_ecdsa.ppk
   ```
